GrADS on dali/discover

There are several versions of the Grid Analysis and Display System (**GrADS**) visualization software available on *discover/dali*. Some of them were built directly from the source code taken from COLA (builds available in */usr/local/other/*) and others were installed based on OpenGrADS. We recommend the use of OpenGrADS because it tends to be more "stable" and offers a wide range of new functions. The GrADS related executables are available at:

```
$SHARE/dasilva/opengrads/Contents
```

To have information on how to use opengrads, type

```
$SHARE/dasilva/opengrads/Contents/opengrads
-h
```

For documentation on OpenGrADS, we refer to the following links:
